Problem: Vernacular medicine and dose companion

Why Elderly Patients Mix Up Daily Pills
3 to 5 daily pills, and packaging designed to confuse them.

01

Everyday tablets like Metformin and Amlodipine print chemical names in tiny silver font. For an elder with failing eyesight or who reads Kannada/Hindi, it's just metallic glare.

02

Morning BP tablets, afternoon calcium, and night diabetes pills all share identical silver strips with white circular tablets.

03

Seniors either skip doses out of fear of taking the wrong pill, or accidentally take morning doses twice.

"Family members spend their workday making anxious phone calls: 'Did you take the white round tablet after breakfast?'"

Meditro

2026

No English Reading: Just Colors, Shapes, and Spoken Voice.

Instead of forcing an elder to search for a drug name, we match the physical pill in their hand.

15-Second Routine Setup
(For the Caregiver)

Pick a shape: Capsule, Round, Oval
Pick a color: Red, White, Yellow, Blue
Pick a meal relation: After food, Before food

Spoken Alerts in Kannada & Hindi

The device speaks aloud at a comfortable 0.85x speed:
"ಊಟದ ನಂತರ ಒಂದು ಕೆಂಪು ಕ್ಯಾಪ್ಸುಲ್ ತೆಗೆದುಕೊಳ್ಳಿ"
(Take 1 red capsule after food)

Grandparent Mode
(Elder's Screen)

No settings or confusing tabs. Only shows the single pill due right now.

One giant green button

Meditro

2026

Built to Run on Low-Cost Phones with Zero Cloud Cost

WEB SPEECH API

Browser-Native Speech (No Paid APIs)

Built on native **window.speechSynthesis API** (kn-IN, hi-IN). Free forever, zero server latency, and works when internet drops.

LOCAL STORAGE

100% Offline & Private (Local Storage)

Medicine routines and intake history live in browser localStorage. No user accounts, zero data tracking, zero leak of medical habits.

LOCAL STORAGE

100% Offline & Private (Local Storage)

Medicine routines and intake history live in browser localStorage. No user accounts, zero data tracking, zero leak of medical habits.

Architecture & Execution Flow

STEP 01
Caregiver Setup
Configure dose schedule & voice language

STEP 02
Stored Locally
Browser LocalStorage (Zero cloud leak)

STEP 03
Scheduled Timer
Background JS interval trigger check

STEP 04
Active Dose Due
Alarm window initiated automatically

STEP 05 • DUAL OUTPUT ALERT
High-Contrast Card + Voice Alert
Prominent visual card rendered + local spoken alert broadcast in Kannada/Hindi

STEP 06
Senior Action
Senior taps massive **"I Took It"** button

STEP 07
State Locked
Card locks for current meal window to prevent double dosing

Technology Stack & Implementation Details

FRONTEND
HTML5, Tailwind CSS, Vanilla JavaScript

VOICE ENGINE
Web Speech API
SpeechSynthesisUtterance

STORAGE
Browser LocalStorage
Zero cloud leak architecture

PROTOTYPING
ChatGPT Astra, Gemini Spark Beta

Handling Real-World Messy Constraints

Accidental double-tapping

Once 'I Took It' is tapped, that meal slot immediately locks with a green tick until the next schedule arrives.

Weak or zero internet in villages

Fully cached PWA bundle. Tested to work seamlessly on airplane mode.

Dialect comprehension

Used conversational colloquial phrasing ('ಊಟದ ನಂತರ') instead of formal textbook vocabulary.

Maintenance costs

Zero database, zero API billing = ₹0 ongoing server cost.

Meditro

2026

Dignity for Seniors, Relief for Families

For Elderly Patients
Independence and self-reliance without waiting for someone to read their blister packs.

For Family Caregivers
Quick 2-second check of the daily log to confirm morning/night pills were taken.

For Hospitals
Direct prevention of emergency admissions caused by accidental drug toxicity or missed insulin cycles.

140M+

Elderly Citizens in India Addressed

Extensible to all **22 official Indian languages**
Zero Infrastructure Cost

Live Prototype & Submission Verification

Live 30-Second Demo Checklist:

1. Click "Load Grandma's Routine" to populate sample morning/night pills.
2. Tap 🔊 speaker icon to hear the spoken alert in natural Kannada.
3. Switch language dropdown to Hindi and hear the same instruction in Hindi.
4. Tap "✅ mark as taken" to verify card locking and adherence logging.

"A narrow problem solved properly: making medicine routines visual, audible, and accessible to everyone."
